

Ewout Vocking

Founder, Nuntiq

Ewout Vocking is the founder of Nuntiq, the Chicago company behind AP Receiving. He has implemented procure-to-pay and finance automation projects since 2012, and built Nuntiq to fix the step he saw break most often: receiving the invoice.

01 Bio

Ewout Vocking has spent more than a decade at the intersection of finance automation and enterprise software. Since 2012 he has implemented and architected procure-to-pay solutions, which gave him a firsthand view of where accounts payable workflows break down and where technology makes a real difference.

Over those years, approval, matching and payment tools kept improving, but receiving stayed stuck on supplier templates and manual corrections. Intake was treated as a side feature, and each new e-invoicing format or network became a project of its own. When AI made it possible to read a supplier's invoice from the first one, he founded Nuntiq to receive every invoice, whatever its format, and check it before it moves on.

Originally from the Netherlands and now based in Chicago, Ewout brings a pragmatic, engineering-first mindset to every product decision, with a focus on consistency, efficiency and results that hold up in real customer environments.

02 Quotes for use

"Every AP process starts at the same place: receiving the invoice."

Ewout Vocking, Founder, Nuntiq

"Over those years, approval, matching and payment tools kept getting better, but receiving stayed stuck on templates and manual corrections. AI now makes it possible to read a supplier's invoice from the first one."

Ewout Vocking, Founder, Nuntiq

"Because AP Receiving is not tied to one AI model or provider, our customers get better AI as it arrives, without doing the work themselves."

Ewout Vocking, Founder, Nuntiq

"We are a new company, and we want our first customers to be partners in the product."

Ewout Vocking, Founder, Nuntiq

03 Ewout can talk about

- Why invoice receiving is still the most manual step in accounts payable
- What "95% accurate" capture really means for an AP team
- Building on several AI models instead of betting on one
- E-invoicing mandates in Europe and what they mean for US companies with EU operations
- Data residency and keeping AI processing in a customer's region
- Starting a finance software company in Chicago
